Tachyon Networks Provides Connectivity for Tour of California

Customized Event Solution Enables Live Video at the Finish Line

San Diego, CA, May 20, 2010 – Tachyon Networks announced today that they are supplying customized video and data connectivity for the 2010 Amgen Tour of California taking place May 16-23. The [Tachyon event solution](#) provides a high-speed network enabling live video feeds, so fans at the finish line can watch the bike race as it progresses.

“Tachyon Networks takes pride in supplying the highest quality network for voice, video and data, anytime, anywhere,” said Dan Negroni, Vice President of Sales and Marketing for Tachyon Networks. “Our highly-portable Auto Deploy VSAT systems are perfectly suited to sports events where broadcasting remote, live action is key. We are pleased that the Amgen Tour of California has chosen Tachyon for their [remote connectivity solutions](#) four years in a row.”

[Tachyon Networks](#) delivers live video feeds to the finish line VIP area at each stage of the race, supporting the Adobe Tour Tracker. Tachyon is also supplying video and data connectivity to staff at the production areas at each of the race’s eight stages. Additionally, Tachyon provides data connectivity to participating companies in the Lifestyle Festival which is located near the finish line at each stage and features a health & fitness expo, cancer awareness education, cycling gear, family activities, bike safety, food and entertainment. Tour of California participants are experiencing the seamless convenience of high-speed Internet and real-time video throughout the event, provided by Tachyon equipment and network connectivity.

About Tachyon Networks

Today’s Tachyon engineers custom, end-to-end satellite solutions for fixed, portable and Comms-on-the-Move (COTM) applications, delivering the highest quality managed network services for data, voice and video. Tachyon serves enterprise and government agencies that require secure mission critical communications, business continuity and disaster recovery. Our complete solutions include management and operations of space segment capacity, teleport facilities, network services, and VSAT equipment and antennas. Tachyon’s financially backed industry-leading SLA guarantees superior quality of service (QoS).
