## ***Tachyon Networks Launches Completely Redesigned Website***

*New Structure, Content, Look and Feel Support Government and Enterprise Marketing and Corporate Re-Branding*

San Diego, CA, June 10, 2010 – [Tachyon Networks](#) today announced the launch of their completely redesigned website. Visitors to the site can explore how Tachyon serves various end markets from [airborne comms-on-the-move \(COTM\)](#) for military customers to ruggedized and easily deployable communications solutions for oil and gas, alternative energy, construction, mining, and special events. With a totally fresh appearance and format, the new website contains more information on Tachyon's satellite communications products and services.

"Tachyon's core business has successfully expanded into the military COTM space with the launch of our ATR-9000 Series products and our increased space segment capacity via the IS-24 satellite over the AfPak theater," stated Peter Carides, CEO of Tachyon. "Visitors to our new site will get a clear picture of how Tachyon addresses the needs of all of our customers requiring advanced networks and hardware to handle anything from uploading mission-critical airborne ISR footage in Afghanistan, to monitoring an unmanned oil rig off the equatorial coast of Africa, to bringing a disaster-struck area back online."

The Tachyon website has undergone significant improvement in the areas of content, navigation, and design. Whether users are interested in learning about satellite broadband equipment, managed network services, engineering services or space segment capacity, they will find a wealth of information in a user-friendly, easy to navigate format. Specific examples of Tachyon technology in the market today are highlighted in downloadable data sheets and case studies.

Tachyon worked with one of San Diego's premier design agencies, [Incitrio](#), to build the new site. Incitrio's expert team brought a fresh look and feel to the Tachyon site as a part of the company's overall re-branding. The site incorporates flash to highlight Tachyon's markets served as well as intuitive news and events calendar modules.

"When you focus on the needs of both the client and the end user, only then can you design a site that is completely aligned with an organization's goals," said Angela Hill, President & Creative Director of Incitrio "Integrating branding, core values, and best practices in user experience with a strong, clear message is

## For Release

absolutely vital to success. This new site solidifies Tachyon's position as thought leader in Satellite Broadband, and is yet another reminder of how they continue to surpass industry standards."

### **About Tachyon Networks**

Today's Tachyon engineers custom, end-to-end satellite solutions for fixed, portable and Comms-on-the-Move (COTM) applications, delivering the highest quality managed network services for data, voice and video. Tachyon serves enterprise and government agencies that require secure mission critical communications, business continuity and disaster recovery. Our complete solutions include management and operations of space segment capacity, teleport facilities, network services, and VSAT equipment and antennas. Tachyon's financially backed industry-leading SLA guarantees superior quality of service (QoS). For more information see [www.tachyon.com](http://www.tachyon.com).
